

Analysis of the Rosemont Copper Mine

This image was captured by FWS motion-sensor camera of a jaguar travelling on or near the Rosemont site, potentially in a water of the US. (seasonally dry desert stream as habitat corridor)

Since 2009, EPA has worked with federal, state and local agencies to evaluate the proposed Rosemont Copper Mine project. In addition to formal comment letters detailing our concerns, we have convened several meetings and conducted site visits to understand the mine's environmental impacts and to work collaboratively with the applicant and partner agencies to resolve our outstanding concerns.
